Public Lecture

'Fulfilling your Dreams and Ambitions'

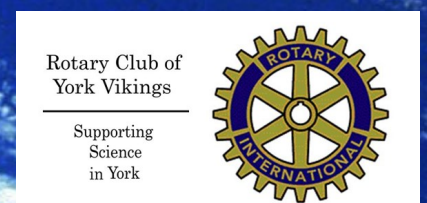

Michael Foale CBE PhD

Wednesday 4 March 2015

7.00pm Memorial Hall

Michael Foale is a British-born NASA astronaut and astrophysicist. Michael's six space missions included him having brought the Hubble Space Telescope back to life, having been Commander of the International Space station and saving the Russian MIR Space Station as it tumbled out of control around the earth, following the only ever collision in space. He held the record for the amount of time spent by an astronaut in space. He will describe his incredible opportunities and achievements and emphasise to young people that they can adopt the NASA 'you can do it spirit' and go on to be whatever they aspire to be.

Admission is free, but tickets are required. Light refreshments provided. Tickets available from stpetersyork.eventbrite.co.uk. For enquiries phone 01904 527315
